

ABSTRACT:

This electronic equipment comprises a housing which is formed by two housing parts of which one (15) is integral with a retractable screen (10) which may take up a first position called closed position and a second position called open position which permits to see the whole screen. In the closed position one part of the screen remains visible and the
5 other part of the screen is hidden in a second part of the housing (5). This second housing part supports other elements of the equipment, for example, microphone (2), keyboard (1) etc.

Application: mobile telephones that can be used with the Internet (WAP).
